1351 STORMWATER DRAINAGE (CONSTRUCTION)

1 GENERAL

1.1 RESPONSIBILITIES

Objectives
General: Provide drainage works as a complete system for collecting and carrying stormwater from roadways, open spaces and built-up areas as documented. Include Water Sensitive Urban Design (WSUD) principles as follows:
- Preparation for stormwater drainage construction.
- Temporary drainage during construction.
- Detention or re-use of stormwater.
- Vegetation filtering or water efficient landscaping.
- All work associated with erosion control.

Performance
Precedence: Where any Council adopted document used in conjunction with this worksection includes technical requirements that conflict with this worksection, the requirements of the Council adopted document shall take precedence.

1.2 CROSS REFERENCES

General
Requirement: Conform to the following:
- 0136 General requirements (Construction).
- 0152 Schedule of rates – supply projects.
- 0161 Quality (Construction).
- 0167 Integrated management.
- 0257 Landscape – Roadways and street trees.
- 0319 Minor concrete works.
- 1101 Control of traffic.
- 1102 Control of erosion and sedimentation (Construction).
- 1112 Earthworks (Roadways).
- 1121 Open drains, including kerb and channel (gutter).
- 1352 Pipe drainage.
- 1353 Precast box culverts.
- 1354 Drainage structures.

1.3 REFERENCED DOCUMENTS

Standards
General: The following documents are incorporated into this worksection by reference:

AS 1141 Methods for sampling and testing aggregates
AS 1141.11.1-2009 Particle size distribution - Sieving method
AS 1289 Methods of testing soils for engineering purposes
AS 1289.3.2.1-2009 Soil classification tests - Determination of the plastic limit of a soil - Standard method
AS 1289.3.3.1-2009 Soil classification tests - Calculation of the plasticity index of a soil
AS 1289 4.3.1-1997 Soil chemical tests - Determination of the pH value of a soil - Electrometric method
AS 1289 4.4.1-1997 Soil chemical tests - Determination of the electrical resistivity of a soil - Method for sands and granular materials
1.4 INTERPRETATIONS

Abbreviations
General: For the purposes of this worksection the following abbreviations apply:
- D: External diameter of the pipe.
- NATA: National Association of Testing Authority.

Definitions
General: For the purposes of this worksection the following definitions apply:
- Materials: In conformance with relevant worksection.
- Inadequate foundation material: Material beneath or adjacent to the proposed drainage structures which the Superintendent deems to be of insufficient strength to support the structure and loads on the structure, or material whose characteristics the Superintendent deems would adversely affect the performance or construction of the drainage structure.
- Selected fill: Backfill material with known properties and grading placed and compacted in layers.
- Water Sensitive Urban Design (WSUD): Design principles aimed at improving the sustainable management of the urban water cycle. It integrates the planning and design of urban water cycle, water supply, waste water, stormwater and groundwater management, urban design and environmental protection.

1.5 SUBMISSIONS

Approval
Submissions: To the Superintendent's approval.

Documents
General: Submit the following for approval:
- Materials: Off-site certificates of components including certificate of the source of the materials used.
- Temporary drainage: Detailed proposals for diversion of existing flow paths.
- Calculations: Survey set out of stormwater works and quantity calculations.
- Work-as-executed drawings: Include stormwater system information sheets and works.
- Components: Pipes and fittings.
- Samples: For conformity testing to relevant standards.
- Technical data: Product information.
- Execution details: Refer to HOLD POINTS.
- Adverse ground conditions: NATA certificate for pH and electrical resistivity of soil tested to AS 1289.4.3.1 and AS 1289.4.4.1.

1.6 **HOLD POINTS AND WITNESS POINTS**

**Notice**

General: Give notice so that the documented inspection and submissions may be made to the **HOLD POINT table** and the **WITNESS POINT table**.

2 PRE-CONSTRUCTION PLANNING

2.1 AUTHORITY APPROVALS

Traffic control
Provision for traffic during construction: To 1101 Control of traffic.

Temporary drainage
Documentation: Submit details of procedures/devices to maintain effective drainage of the works area during construction. This is a HOLD POINT.

Road opening permit
Application: Submit application to the relevant Council for approval to undertake works to road or footpath. This application includes but is not limited to the following information:
- Opening and compaction specifications: To 1152 Road openings and restoration (Utilities).

2.2 ESTABLISHMENT

Documentation
Survey control: Required for the following:
- Mapping and pegging the drainage system.
- Locating components.

2.3 SCHEDULING

Program of works
General: Program the works as follows:
- Materials: Arrange the program for compliance and handling of components and materials.
- Authorities: Conform with approvals and the local environmental requirements.
- Constraints: Incorporate HOLD POINTS and WITNESS POINTS.

3 MATERIALS

3.1 GENERAL

Certificate of conformity
Verification: Provide certificates of conformance to the specification for all pipes, culverts, precast concrete units, access covers, road grates or frames and all materials and components.
Certificate: Identify the item and record the inspection and test records that verify conformity.

Materials and components
Pipes: To 1352 Pipe drainage.
Precast: To 1353 Precast box culverts.
Structures: To 1354 Drainage structures.

3.2 BEDDING, SUPPORT AND BACKFILL MATERIAL

General
Recycled material: To Specification for supply of recycled material for pavements, earthworks and drainage. Submit for approval any recycled material proposed.

Durability
Geotechnical NATA test: Determine the pH and resistivity of water and soil in conformance with AS 1289.4.3.1 and AS 1289.4.4.1. This is a HOLD POINT.
Test for concentration of impurities: Carry out groundwater or soil extract testing for chloride, sulfate and aggressive CO₂. Testing to conform to AS 1289.4.2.1. This is a HOLD POINT.
Materials and protective treatment for durability: Conform to 1352 Pipe drainage, 1353 Precast box culverts, 1354 Drainage structures.

Bed and haunch zones
Material for bed and haunch zones: Select fill to conform with the following:
- Particle size distribution: Within the limits set out in AS 3725 Table 6 and tested to AS 1141.11.1.
- Plasticity index: To AS 1289.3.2.1 and AS 1289.3.3.1 with a maximum of 6.

Side and overlay zones
Fill material: Select fill material for side and overlay zones of pipes, box culverts and adjacent to other drainage structures to conform with the following:
- Maximum dimension: 50 mm.
- Plasticity index: Between 2 and 12 to AS 1289.3.2.1 and AS 1289.3.3.1.

Material adjacent to weepholes
Requirement: Conform to the following:
- Clean, graded, hard and durable stone or river gravel.
- Nominal particle sizes between 10 and 50 mm.
- Maximum particle dimension < 50 mm.
- Minimum particle dimension < 5% by mass passing the 9.5 mm AS sieve.

Flexible pipes
Embankment material: If using flexible pipes and the embankment method, provide embankment material to AS/NZS 2566.1 clause 3.3 or AS/NZS 2566.2 Appendix G.
4 EXECUTION

4.1 ESTABLISHMENT

Temporary drainage during construction
General: For each part of the drainage system, complete the erosion and sedimentation control measures before commencing the drainage works (except those parts of the drainage system forming part of the control measures).

Control of erosion and sedimentation: Conform to 1102 Control of erosion and sedimentation. Make adequate provision for runoff flows at drainage works under construction or at surrounding areas/structure.

Dams and diversions: Do not dam up or divert existing watercourses (either temporarily or permanently). Submit for approval if required.

Material and equipment: Locate material and equipment clear of watercourses or secure to prevent danger or damage in the event of large runoff flows.

Swales and buffer strips: Protect during construction or make use of the swale as a temporary measure. Provide geotextile with a shallow 50 mm topsoil and instant turf laid perpendicular to the flow path.

Stabilisation of topsoil areas: Immediately following earthworks where required, stabilise the topsoil with hydroseed to 0257 Landscape – roadways and street trees, Hydroseeding.

Siting of culverts
Requirement: Set out the stormwater drainage systems and identify the following:
- The location, lengths and levels at outlets and inlets of pipes and box culvert structures.
- The locations and levels of gully pits, junction boxes, energy dissipators, and inlet and outlet structures.
- The location and levels of the ends of wingwalls and headwalls.
- The location and levels of open drains.

This is a HOLD POINT.

Site conditions: If required to suit site conditions, amend the inlet and outlet locations, designed levels or the culvert length as part of the work covered by the schedule of rates.

Changes by contractor: Submit for approval any proposed change to the culvert location, length, designed levels, culvert strength, conditions of installation or cover to suit construction procedures, and provide proposed culvert set-out in addition to the designed set-out. This is a HOLD POINT.

Excavation near underground services
Public utilities within the excavation for drainage systems: Obtain approval of the relevant authority for the method of excavation before commencing excavation. This is a HOLD POINT.

Contact: DIAL 1100 BEFORE YOU DIG is a free service, from anywhere in Australia, collecting enquiries and passing them on to affiliated utilities to assist in locating underground pipe and cables (initial response possible within two working days with responses from utilities some time later). See www.1100.com.au. This is a HOLD POINT.

Locations: Obtain locations of water, sewer, stormwater, gas, electricity and telephone services.

Marking: Before commencing earthworks, locate and mark existing underground services in the areas which will be affected by the earthworks operations including clearing, excavating and trenching. This is a HOLD POINT.

Construction traffic
Protection measures: If proposing to move heavy construction plant or vehicles over pipe or box culverts structures, provide verification and certification of protective measures. This is a HOLD POINT.

Existing structures
Existing redundant drainage structures: Demolish and remove existing redundant pipe culverts, headwalls and pits as shown on the drawings.
4.2 OPEN DRAINS

General
Detail: Provide open drains, associated embankments and protective linings in conformance with 1121 Open drains, including kerb and channel (gutter).

4.3 EXCAVATION FOR DRAINAGE SYSTEMS

General
Topsoil: Remove topsoil in conformance with 1112 Earthworks (Roadways) before undertaking stormwater drainage excavation.

Trench support stabilising: Provide any shoring, sheet piling or other stabilisation of the sides of trench excavations necessary to conform to statutory requirements.

Excavation level: Excavate trench or foundation for stormwater drainage works to the designed level of the bottom of the bedding or foundation. Remove all loose material.

Excavation: Level beds of swales, batter slopes and bioretention trenches shown on the drawings.

Confirmation: Confirm surrounding soil type with design. Give notice if not consistent with the design. This is a HOLD POINT.

Pipelines

Trench size for pipelines: Excavate the trench to AS/NZS 3725. This is a WITNESS POINT.

Installation condition: [complete/delete]

Side zones of pipe trenches: Density and stiffness requirements to AS/NZS 3725 clause 9.2.3.1 for Type HS3 support.

Embankment installation condition: Prior to placement of bedding and laying pipes, place and compact embankment fill to a height above the top of the bed zone of at least 0.7 times the external diameter of the pipe and for a minimum lateral distance outside each trench wall of 2.5 times the external diameter of the pipe. Place earthworks to 1112 Earthworks (Roadways).

Trench installation condition: Complete the embankment to the underside of the selected material zone prior to the commencement of the excavation.

Drainage structures other than pipes

Excavation: Provide clear width between the structure wall and the face of the excavation as the greater of the following:
  - 300 mm.
  - 1/3 of the excavation face height. This is a WITNESS POINT.

Inadequate foundation material

Notice: Give notice of any area of the foundation including the sides of the trenches that may contain material that is inadequate to support the proposed drainage structure. This is a WITNESS POINT.

Confirmation of inadequate foundation material: Remove and dispose of inadequate foundation material to 1112 Earthworks (Roadways) and replace the material to Bedding, support and backfill material.

Rock foundation: If rock is encountered at the foundation level, excavate for an additional depth. Backfill and compact the additional excavation with material conforming to the requirements for HS3 pipe support. This is a WITNESS POINT.

4.4 BEDDING AND BACKFILLING

Pipe Bedding
Type: Provide bedding depths and compaction for concrete pipes to Pipe installation dimensions table.

Pipe installation dimensions table

<table>

</table>

D = External diameter of pipe

Flexible pipework minimum cover and embedment geometry: To AS/NZS 2566.1 Table 3.1 and Figure 3.1.

**Uncompacted bedding for steel pipes and pipe arches**

Tolerance: Provide minimum 75 mm thick uncompacted bedding material between the foundation and the outer surface of corrugations.

Firm support: Submit details for achieving a dense bedding zone for uniform firm support of the corrugated structure by ramming or other methods. This is a **HOLD POINT**.

**Backfilling**

In situ concrete structures: Do not backfill against in situ concrete drainage structures within 14 days of concrete placement. This is a **WITNESS POINT**.

Trench backfill material: Backfill the remainder of the trench to the underside of the subgrade, or selected material zone in conformance with 1112 Earthworks (Roadways).

Sequence: Commence backfilling and compaction at the pipe or wall to confine future backfill material.

Dimension: Place backfill around the steel pipe or structure, equally balanced on both sides, to the minimum dimension shown on the drawings or as directed.

Tolerance: Check the shape of the culvert during backfilling to ensure that on completion of backfilling, the vertical and horizontal centreline dimensions of the pipe or structure do not vary from the manufacturer’s specified dimensions by more than ± 2% for pipes and pipe arches. This is a **WITNESS POINT**.

### 4.5 COMPACTION

**Foundations, bedding and backfilling**

Foundations, bedding (other than for pipe drainage) and backfilling: To the **Compaction table**, tested in conformance with AS 1289.5.4.1 for standard compactive effort.

**Compaction table**

<table>
<thead>
<tr>
<th>Zone</th>
<th>Relative compaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Foundations or trench base:</td>
<td></td>
</tr>

</tr>
<tr>
<td>- within 1.5 m of finished surface</td>
<td>100%</td>
</tr>
<tr>
<td>Backfill material within the selected material zone</td>
<td>100%</td>
</tr>
</tbody>
</table>

Compaction layers thickness: Compact all material in layers not exceeding 150 mm compacted thickness and to the required relative compaction before the next layer is commenced.

Moisture content range: At the time of compaction, adjust the moisture content of the material to permit attainment of the required compaction (within the range 60% to 95% of the optimum moisture content), as determined by AS 1289.5.7.1 (standard compaction).

**Compacting adjacent to culverts or drainage structures**

Method: If compacting adjacent to culverts or drainage structures, adopt compaction methods which do not cause damage or misalignment.

Damage: Give notice and rectify any damage caused. This is a **WITNESS POINT**.

**Additional requirements for compaction of pipe drainage bedding**

Protection of the pipe from construction damage: If required, adjust the layer thickness to avoid damaging the pipe e.g. for the first placed layer above the pipe crown in the overlay zone.

Bed and haunch zones compaction: Select fill material compaction to the appropriate pipe support requirements for concrete pipes in **Bedding material compaction requirements table**.
Bedding material compaction requirements table

</tr>
</tbody>
</table>

Material directly under the pipe support: Place and shape the top 0.1D mm of the bedding and haunch material directly under the pipe.

H3 pipe support including concrete bedding: Provide concrete grade N20 to AS 3600. Make sure pipe is suitably reinforced in conformance with AS 3725 as standard elliptically reinforced pipe may not be adequate for H3 pipe support.

Cementitious stabilisation in the bedding and haunch zones: Provide cementitious stabilisation, if the impermeability of the natural ground and the slope of the drainage line is such that erosion of bedding material may occur. This is a WITNESS POINT.

4.6 CONCRETE WORK

General
Requirement: Supply and place normal class concrete, sprayed concrete, steel reinforcement, formwork and provide tolerances, construction joints, curing and protection to 0319 Minor concrete works and as shown on the drawings.

4.7 WATER SENSITIVE URBAN DESIGN

Protection
Buffer strips, swales and bioretention systems: Do not allow any construction traffic access to areas of WSUD or infiltration tools to ensure that the soil compaction remains unaffected and as designed. Provide fences where required to 1195 Boundary fences for road reserves. This is a WITNESS POINT.

Permanent protection: Install bollards, signposting or other street furniture to protect the constructed vegetated areas from damage such as parking of cars. Conform to 1192 Signposting and 1193 Guide posts. This is a WITNESS POINT.

Vegetated swales and buffer strips
Details: Conform to the drawings and to the following requirements where appropriate.
Preventing ponding: Provide a perforated pipe beneath the swale drain.
Geometry: Trapezoidal or parabolic shapes, side slopes no steeper than 3H:1V.
Longitudinal slope: Conform to the following if longitudinal slope is not within 1 to 4 %:
- Install check dams for slopes greater than 4%.
- Install under drains for slopes less than 1%.
Maximum swale width: 2.5 m.

Bioretention systems
Depth of filter media: Between 0.3 mm and 0.7mm, as shown on drawings.
Saturated hydraulic conductivity: Between 200 mm/hr and 500 mm/hr.
Perforated pipe capacity: Ensure perforated pipe capacity is greater than the infiltration capacity of the filter media.
Depth of drainage layer: 150 mm to 200 mm.
Drainage layer material: Coarse sand (1 mm) or fine gravel (2 to 5 mm).
Impermeable liner: If the surrounding soil is free draining use an impermeable liner on the base and sides.
Liner type: [complete/delete]
Transition layer: Minimum 100 mm thick layer of sand or geotextile fabric.
Gross Pollution Treatment (GPTs) as part of a treatment system
General: Provide GPTs as shown on the drawings.
Treatment objectives: To capture gross pollutants litter and vegetation larger than 5 mm and sediment particles larger than 0.125 mm.

Landscape and vegetation
Landscape and vegetation: Conform to this worksection and 0257 Landscape – Roadways and street trees.
Minimum depths of topsoil: Conform to the following:
- 150 mm for turf species.
- 300 mm for ground covers and small shrubs.
- 450 mm for large shrubs.
- 600 mm for trees.
Plant species selection: If required, conform to the species as shown on the drawings and submit plant selection for a particular area for approval. Give attention to the plant selection requirements for constructed wetlands, sedimentation basins, ponds and lakes. This is a HOLD POINT.

Stormwater re-use
Requirement: Provide stormwater re-use collection, storage, treatment and distribution in conformance with the drawings and this worksection.

4.8 COMPLETION
Inspection
Closed circuit television (CCTV) inspections: Submit a report including video evidence for all drainage structures as follows:
- On completion of all drainage structures and prior to commencement of pavement construction above the drainage structure to verify the works are within the specified tolerances and without visual signs of structural failure.
- No more than 14 days prior to completion to verify tolerances and ensure that there is no obstruction to the flow of water.

Testing
Quality: Test and submit reports for all characteristics in conformance with 0161 Quality (Construction).

Flushing
General: On completion of the entire system, flush all pipes clean from end to end and leave in proper working order.

5 LIMITS AND TOLERANCES
Application
Summary: The limits and tolerances applicable to this worksection are summarised in Summary of limits and tolerances table.

### 6 MEASUREMENT AND PAYMENT

#### 6.1 MEASUREMENT

**General**

Payments made to the Schedule of Rates: To 0152 Schedule of rates – supply projects, this worksection, the drawings and Pay items 1351.1, 1351.2 and 1351.3.

Lump Sum prices: Not acceptable.

Unpriced items: For each unpriced item listed in the Schedule of Rates, make due allowance in the prices of other items.

**Methodology**

The following methodology will be applied for measurement and payment:

Erosion and sedimentation control: To 1102 Control of erosion and sedimentation.

Topsoil removal: To 1112 Earthworks (Roadways).

Concrete work: To 1352 Pipe drainage, 1353 Precast box culverts or 1354 Drainage structures.

Sprayed concrete work: To 0319 Minor concrete works.

Rock filled wire mattresses and gabions: To 1121 Open drains, including kerb and channel (gutter).

Excavation and stone pitching of open drains: To 1121 Open drains, including kerb and channel (gutter).

Miscellaneous minor concrete work: To 0319 Minor concrete works.
