

CONSTRUCTION WORK HYDE ST, BELLINGEN Work Outside of Normal Hours

Australia's National Broadband Network (NBN) is rolling out in your area. It's an upgrade to our existing telecommunications network, designed to provide the infrastructure for affordable high speed internet and telephone access for all Australians.

Visionstream, an NBN Co construction partner will commence work shortly.

What's happening?

Construction work for rolling out the NBN is generally carried out during daytime hours. However, to minimise impact on local businesses, Visionstream will conduct civil works after business hours.

When will the work outside of normal hours take place?

Civil activities are required on **Hyde Street, Bellingen**, between Short St Lane and Bridge Street, with works commencing on **Thursday 1st November**, between the hours of **5pm and 11pm**. Visionstream expect these works to be completed by **23rd November 2018**. (subject to factors including weather).

NB: Non-intrusive activities, that do not impede commercial trade, will take place during normal business hours.

What to expect?

We will try to minimise any inconvenience you may experience while the construction work is occurring during these times, however residents close to the construction may notice some impacts such as:

- Lighting: Additional lighting will be angled down away from adjacent properties to reduce light spilling into homes.
- Noise: Work has been programmed so as the noisiest activities are undertaken first.
- Vehicles: By law all our construction vehicles are fitted with reversing beepers for the safety of the public and our workers. While we recognise at times this can be a nuisance for residents, we are unable to switch them off.
